Forescout eyeExtend for Palo Alto Networks GlobalProtect Module Configuration Guide v1.0

About the GlobalProtect module

GlobalProtect is a virtual private network (VPN) solution developed by Palo Alto Networks designed to provide secure and encrypted remote access to an organization's network resources.

The GlobalProtect Module integrates the Forescout Platform with on-premise GlobalProtect instances running on Palo Alto Networks firewalls to provide Forescout eyeSight and eyeControl of managed endpoints. The module identifies endpoints connected to a GlobalProtect server through syslog messages sent to the focal Forescout device.

Supported Forescout Platform Version

GlobalProtect Module Version	Forescout Platform Version
1.0	Version 8.3 or above
