FORESCOUT + Microsoft

FORESCOUT + MICROSOFT: BETTER TOGETHER

Detect true threats and secure every asset across your enterprise with continuous asset protection.

YOUR EVERYDAY BATTLE

Organizations struggle to safeguard their employees, critical assets and business applications in today's increasingly distributed IT environments. In addition, SOC teams are struggling to keep up with the onslaught of cybersecurity threats.

The lack of comprehensive visibility:

- Prevents organizations from fully identifying what they need to protect
- Slows their journey to implementing Zero Trust
- Restricts the ability to validate identity regardless of an asset's location, user or device type.

Resource constrained teams are facing alert fatigue and a sophistication of attacks from cyber ecosystem tools that do not work together to detect threats in today's complex environments.

YOUR SOLUTION SIMPLIFIED

Continuous asset protection with real-time visibility and control of every asset and threat — anywhere.

With Forescout and Microsoft, you can identify and assess every asset. Contain and control every risk in any location. Detect and respond to every threat — including unmanaged assets.

24%
of assets go undiscovered in enterprise environments

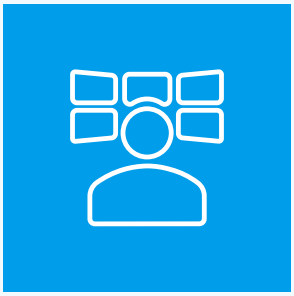
48%
of organizations can't detect threats from unmanaged assets

13
attacks per second on newly connected internet assets

FORESCOUT + MICROSOFT: BETTER TOGETHER

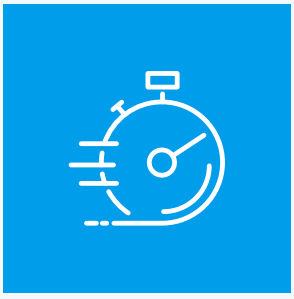
Forescout and Microsoft together give you an unparalleled, comprehensive solution that reduces complexity, saves time and improves security.

- **Design and Assure Your Zero Trust Network**
  - Unify asset discovery and classification of all managed and unmanaged assets in real-time.
  - Proactively ensure compliance and security posture by continuously validating essential Microsoft security practices.
  - Dynamically control network and resource access by asset, persona or network location with pinpoint policy controls.



- **Modernize Your Security Operations**
  - Use Microsoft Sentinel to isolate relevant incidents – and eliminate the noise, so analysts can focus on the most legitimate threats and increase security operations productivity.
  - Automate routine tasks to reduce SOC team's workload and eliminate errors from manual intervention.
  - Receive ongoing threat intelligence to streamline investigations and adapt to evolving threats.

- **Automate Threat Detection & Response**
  - Reduce business disruption risk by remediating threats across the environment in real-time.
  - Remove identity-based detection coverage gaps using industry-standard kill chain frameworks, such as MITRE ATT&CK.
  - Eliminate silos from the SOC tool stack by converging capabilities into a unified SaaS experience, reducing MTTR.



- **Increase Security Operations Productivity**
  - Meet budget constraints by optimizing IT and security operations with a consolidated solution.
  - Consolidate tools with a joint solution that meets all your security and operational needs.
  - Lower costs associated with analyst burnout, turnover, recruitment and training.

FORESCOUT + MICROSOFT: BETTER TOGETHER

For decades, Forescout and Microsoft have collaborated to address critical cybersecurity challenges facing organizations with a focus on protecting all assets from nonstop advancements in the threat landscape.

Proactively defend against threats by combining this expertise in proactive cyber risk and compliance management with the threat mitigation techniques needed to protect your entire environment, no matter the asset — managed or unmanaged.

With Forescout and Microsoft, simplify security by quickly, accurately and confidently identifying, detecting and blocking threats.

ACTIONABLE PROACTIVE SECURITY	RISK & THREAT CONTAINMENT	THREAT CERTAINTY
Eliminate security blind spots as your business and technology stack grow. Map your attack surface and understand your exposure across all assets - managed and unmanaged. Mitigate your risk by remediating compliance and security gaps of network and endpoint devices before an event occurs.	Reduce the blast radius and minimize impact to your business with automated real-time network and host-based controls. When a threat hits the network, every second matters. Don't wait for manual intervention. Reduce dwell time with control automation to close the gap quickly.	Extend your threat visibility from managed assets into unmanaged assets on traditional agents. Don't guess at what is happening in your critical environments. Have complete coverage of your threats and be certain you can detect and respond to any threat from any asset.

FORESCOUT + MICROSOFT INTEGRATIONS

Microsoft Defender for Endpoint

Protect your assets and close gaps

Secure blind spots in your network by validating that Microsoft Defender is installed, running and up to date on every applicable device. Mitigate risks by starting, deploying or updating the latest Microsoft Defender definitions or version. Leverage Microsoft Defender asset threat intelligence to contain or mitigate assets in real-time as threat profiles change.

Microsoft Intune / Endpoint Configuration Manager

Continuous management of every agent-able asset

Extend Microsoft's reach to all agent-able assets and create a true inventory of every asset. Validate your agents and profiles are deployed and running to close gaps. Use Forescout's support for legacy Windows OS's, Linux and Mac OS to have comprehensive coverage and real-time inventory that is compliant, up to date and secure.

Entra ID / Active Directory

Zero Trust Assurance for your ENTIRE network

Increase your Zero Trust maturity when integrating Forescout's complete asset intelligence with Microsoft's Entra's users and identities. Extend your Zero Trust controls with powerful conditional access including user, asset, location, type and risk data to make sure every asset has the right level of access.

Microsoft Sentinel

Unified Security Operations for managed and unmanaged assets

Cut through the noise with enhanced managed asset telemetry to quickly allow SOC teams to triage incidents with certainty. Extend your threat coverage with unmanaged asset threat intelligence to have a unified threat view in a single pane of glass.

Microsoft CoPilot

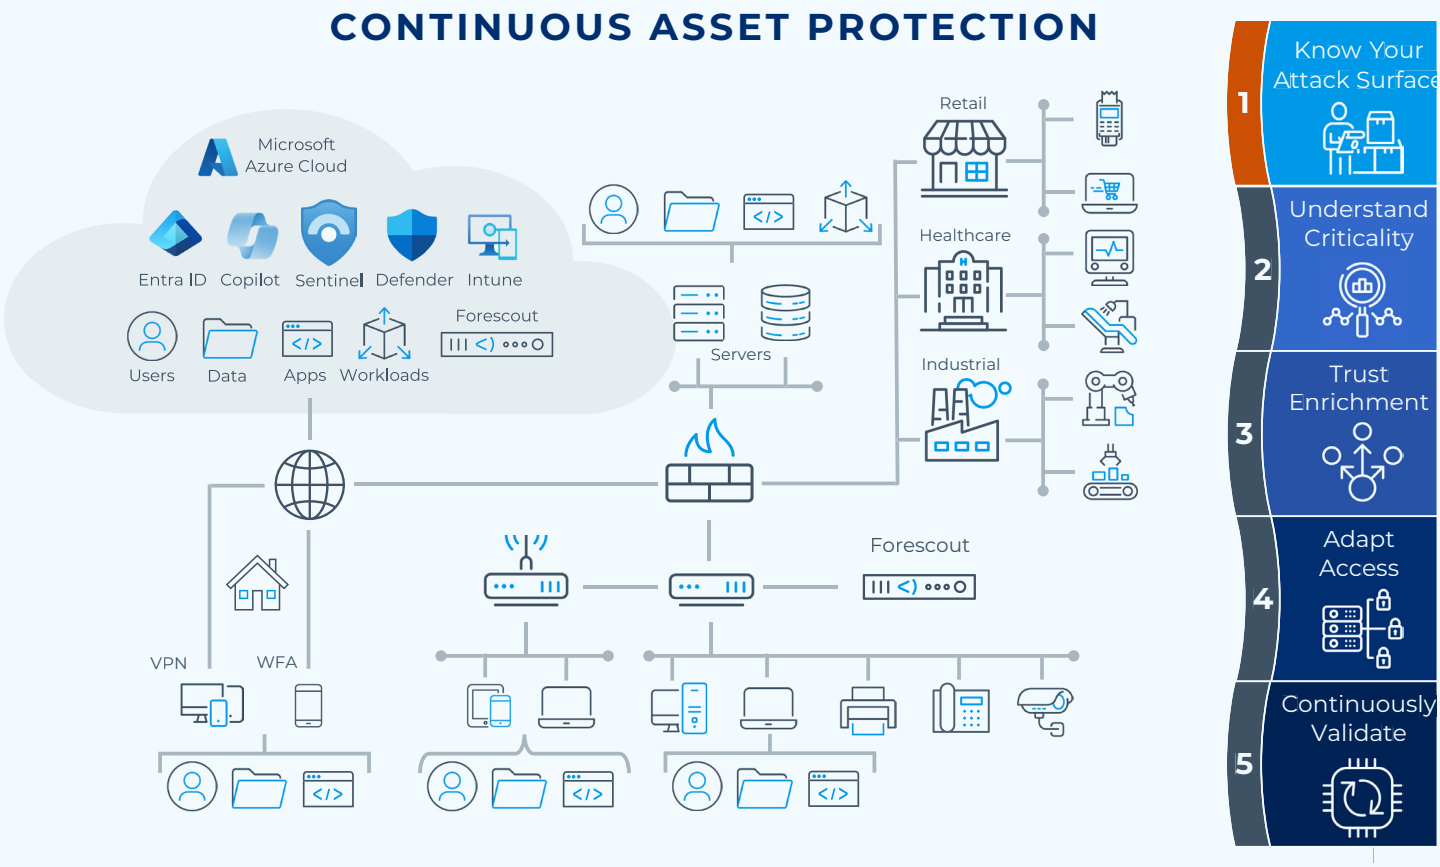
Enhance your security team's efficiency with Forescout asset intelligence

SOC teams need an ally as they hunt for the latest threats. Make sure they have the best chance by bringing Forescout's asset intelligence to their CoPilot in the fight. Give CoPilot real-time insight into threats, misconfigurations and compliance issues across any asset.

Microsoft Azure

Real-time visibility and control of Microsoft Azure workloads

Don't leave your visibility and control at the perimeter. With Forescout and Microsoft you have visibility and real-time control of your Azure workloads to not only secure your assets but keep cloud costs in control from potential threats.



The Forescout and Microsoft partnership benefits organizations looking to simplify their security operations and maximize their overall security posture. Contact us today to learn more about how the Forescout and Microsoft partnership can help you.

See it in action. Take a test drive. Schedule a demo today.
