

Joint value proposition

Powering digital security & operational resilience with next-gen technology

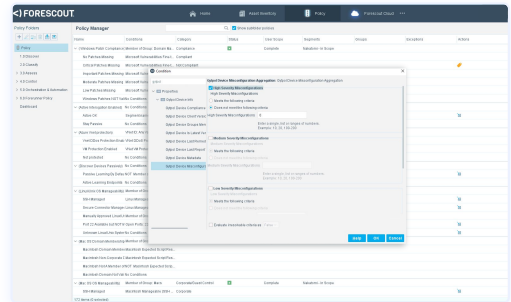

Shared vision and purpose

Forescout and GYTPOL both provide technology and tooling in pursuit of digital security and operational resilience. More than that though, both companies are born of the belief that true security is only achievable with full asset visibility and systems capable of self-healing (auto-remediating) whenever things break from established standards.

Better together

The joint Forescout-GYTPOL offering is a direct outgrowth of the companies' shared security philosophy. In practice, the integration of these two platforms provides users **a range of capabilities entirely unmatched in the market today**.

Ultimately, it's about empowering CISOs and CTOs to quickly, easily, and meaningfully improve their security postures.

Use cases

Enhancing endpoint visibility and configuration intelligence, the combined offering delivers:

- Bullet-proof **detection & correction** of insecure device/system configurations
- Expanded and enriched **host indexing** in Forescout – improving restriction regimes, threat protection, and policy refinement
- Automated **network access control**, **segmentation**, **remediation**, and **threat response** workflows (preventing lateral movement and privilege escalation)
- Continuous real time **asset compliance/compromise assessment**
- Operational **impact analysis** of available remediations (supporting zero-disruption remediation)
- Instant **rollback** of actions taken

Benefits

These new capabilities help organizations...

Reduce the attack surface

Shorten response and resolve times

Streamline workflows

Reduce the burden of IT administration

Ensure framework adherence

Simplify compliance audits

About Forescout

Forescout Technologies, Inc., a global cybersecurity leader, continuously identifies, protects, and helps ensure the compliance of all managed and unmanaged connected cyber assets – IT, IoT, IoMT and OT. For more than 20 years, Fortune 100 organizations and government agencies have trusted Forescout to provide vendor-agnostic, automated cybersecurity at scale.

The Forescout® Platform delivers comprehensive capabilities for network security, risk & exposure management, and extended detection and response. With seamless context sharing and workflow orchestration via ecosystem partners, it enables customers to more effectively manage cyber risk – mitigating threats to critical infrastructure. Forescout products directly leverage this research, which is also shared openly with vendors, agencies, and other researchers.

About GYTPOL

Helping manage and harden endpoints, GYTPOL detects and corrects configurations that put connected devices at risk. The platform enables push-button remediation and reversion to secure any individual device or device group according to the relevant compliance standards or controls and without any risk of disruption.

GYTPOL is trusted by more than 300 brands from all over the world, including many well-known Fortune 500 companies
